An Inventor’s Eye Toward Helping the Legally Blind to See
A Discussion with James C. Wyant College of Optical Sciences Professor Hong Hua and Gary Foster of eSight

November 20, 2019, 12:00-1:00 PM
Meinel Building, Room 821
Lunch will be provided for advance registrants.

For those who are legally blind or have impaired eyesight, low vision has an immense impact on an individual’s mobility, independence, ability to function in the world and quality of life.

Professor Hong Hua, recognized for her research in innovative 3D display technologies, complex visualization systems and novel image acquisition systems, worked with graduate student Jason Kuhn to develop a technology that has enabled the creation of the latest generation of best-in-class near-eye optics.

Working with Tech Launch Arizona, the University patented the technologies and licensed them to eSight Corporation.

Join us for lunch and a discussion with Professor Hua, hear her story and learn what it takes to take ideas from the lab to the world for maximum impact.

Gary Foster, one of eSight’s most prolific users and Customer Success Team Manager, will be speaking about the impact eSight has had on his life, and the lives of those around him. Gary will be joining us via Zoom.

Kennedy Nyairo, TLA Sr. Licensing Manager for the College of Optical Sciences, will moderate our discussion.

Who should attend?

While this talk will be geared toward faculty, researchers, graduate students and staff, all are welcome.

Register early to reserve your seat and have lunch provided for you.
